

Project Well Site Visit

Paromita Hore, Ph.D., M.P.H. and Robert C. Harrington, C.I.H., M.S.

Arsenic contamination of drinking water in areas such as Bangladesh and India has been a public health concern for many years. Through Dr. Timir Hore, we learned about Project Well USA several years back. On December 13th, 2008, we were able to accompany a team of scientists who are closely involved with the project and visit a number of Project Well USA dug well sites in India. The team was joined by several of the field staff as we visited the dug wells. The sites appeared well maintained. The water was potable. During these visits we were also able to meet with villagers that reside in the surrounding areas. The study team was well-received by the villagers. All in all, the visit was quite nice. We are proud of Project Well and its mission. We will continue to stay informed about the Project.
